

RNA Medical Bay State POCT Plant Tour and Technology Roundtable

RNA Medical would like to thank the participants from the Bay State POCT Collaborative for making the Plant Tour and Technology Roundtable a great success. This educational event was held on April 26, 2006 at the Bionostics/RNA Medical facility located in Devens, MA. Highlights of the plant tour included a look at Bionostics' state of the art filling and packaging equipment, a hands-on control solution demonstration in the R&D Laboratory and the inner workings of the Quality Control Laboratory. The classroom discussions centered on RNA's PeerQC services, the first on-line real-time statistical service program. Time was also spent introducing new POC controls offered by RNA Medical and soliciting opinions on other types of controls needed to improve POC testing. The day wrapped up with the Bay State POCT Collaborative addressing group business.
