

RNA Medical 2006 International Distributors Meeting

RNA Medical recently completed a very successful week-long trip to Europe to meet with its international distributors and partners. The trip culminated with a one day meeting with its key distributors to discuss the unique market needs of the various European countries. Topics of discussions included new controls for the hospital and POC markets as well as a new Mylar®-wrapped glass blood collection (capillary) tube designed specifically for use with the i-Stat cartridge. RNA also announced its plans to focus heavily on CE marked products for the European market and its intention to display new products at the Medica Show in Germany in November.

A special presentation was made to Jim Ashton, Director – ProTech Medical for his 15 years of loyal service to the RNA Medical brand.
